

RQ2: the marginal rules sit under the target on average and still exceed it on 20-36% of draws

CSE2018, unknown-attack prevalence = 1%, n = 12,000, 25 calibration draws; bars show mean $\pm$ 95% CI over seeds

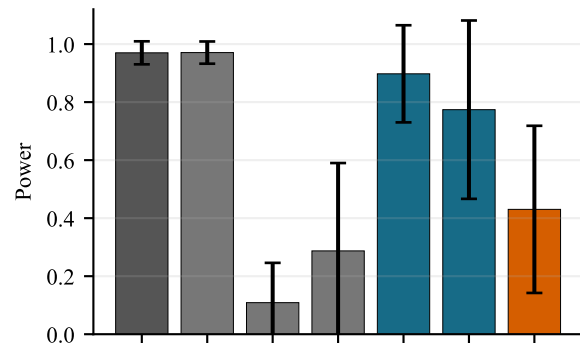

Calibration draws that exceed $q = 0.10$

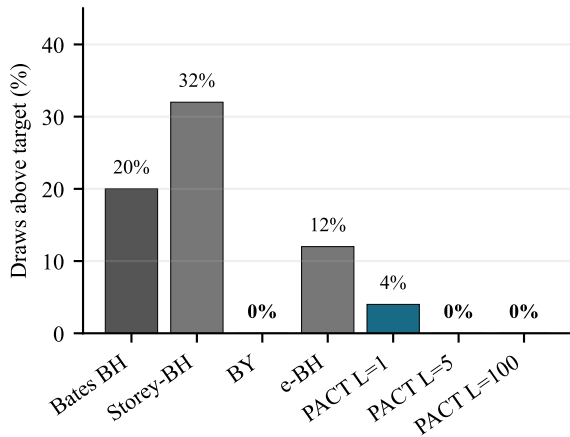

Realised FDR, $q = 0.10$

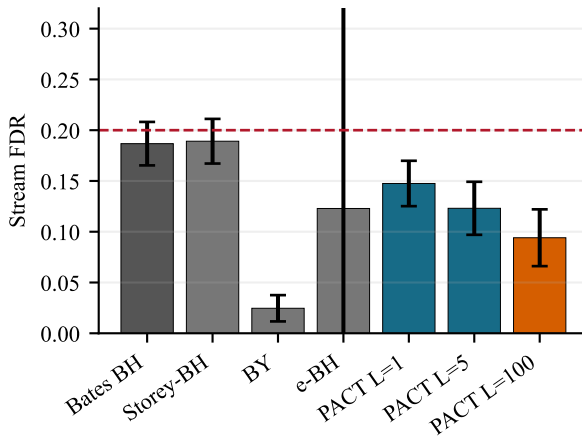

Detection power, $q = 0.10$

Calibration draws that exceed $q = 0.20$

Realised FDR, $q = 0.20$

Detection power, $q = 0.20$
